READING 1

Before You Read
Read these questions. Discuss your answers in a small group.
1. How often do you eat fish?
2. Do you ever visit the ocean to go fishing or to relax on a beach?
3. How do oceans benefit people?

Read
This article is part of a series of articles about our changing oceans.

SAVING THE OCEANS
The oceans of the world **occupy** over 70% of the earth's surface. They provide food for billions of people, serve as places of recreation, and facilitate the transportation of passengers and cargo. For all of human history, people regarded the oceans as an indestructible and **infinite** resource. Until recently, humans had little **impact** on the oceans. However, as the earth's population increases, human activity will **ultimately** destroy the oceans unless immediate steps are taken.

OVERFISHING
Overfishing is one major threat. Fish are being taken out of the oceans faster than the remaining fish can reproduce. A big fish—tuna, cod, shark, or swordfish—yields many pounds of delicious seafood when it reaches maturity. However, to meet the increasing demand for these fish, commercial fishermen began catching small, immature fish. In the **process**, they almost destroyed the species. Ocean scientists estimate that 90% of these big fish are now gone from the oceans, and about 30% of all fished species have been destroyed.

OCEANS AS A SOURCE OF FOOD
Of the earth's seven billion people, over one billion rely on fish as a source of protein. Billions more eat fish frequently because of its health benefits and its good taste. Throughout the world, food from the sea provides between 5% and 10% of the total food supply. But when fish disappear from the oceans, they will also disappear from our dinner plates. The **impact** on those who rely on fish could be malnutrition or even starvation.

HOW HUMANS IMPACT OCEANS
Humans are **impacting** ocean life not only by what they take out of the oceans, but also by what they put into the oceans. Carelessly discarded cans, bottles, plastic cups, and baby diapers find their way into the stomachs of fish, often killing them. Toxic chemicals and industrial trash are also discarded into the oceans, either accidentally or thoughtlessly. Such **conduct** pollutes the water and kills sea life. Spills from a single oil tanker can **contribute** 200,000 tons of oil to the already polluted oceans. In the United States, an estimated 15,000 tons of automobile oil **annually** washes off roads into rivers and streams and **ultimately** into the sea.

2008 HIGHEST OCEAN HARVESTS
World Total 94.8 (Millions of tons)

-------	-----	-------	-----	------	-----	-------	-----	---------------	-----	----------------	-----	-------	-----	------	-----	---------	-----

Along with the harmful oil, however, run-off also carries tons of nutrients in the form of plant matter, fertilizers, animal waste, and garbage that can be **traced** to cities, farms, factories, and forests. Poisonous algae and bacteria (microscopic plants and animals) in the ocean feed on the nutrients. As the run-off increases, the **aggregation** of algae and bacteria increases, further **eroding** the marine environment. Small fish that feed on the algae and bacteria are sickened or killed by the poisons they contain. When larger fish feed on the smaller ones, they too are

3A Reading Textbooks (2)

Academic textbooks present information and, to some extent, arguments and opinions. Paragraphs in textbooks typically have one main idea (usually expressed in a topic sentence), plus some supporting evidence, often involving reasons and examples. To gain an overview of the text, it is important to work out what are the main ideas and the supporting evidence. You also need to understand the author's stance (or point of view), and how using specific language can change the author's meaning.

This module covers:

- Identifying main ideas and supporting evidence in a text
- Building word families
- Using adverbs to express stance

TASK 1 Gaining an overview of a text

1 You are going to read a short text entitled *The print revolution*. Decide which of the items below you would expect to be included. Add any others, and give reasons. where and when printing developed how printing developed the future of printing the most popular printed books printing technology the main languages in print

2 Read Text 1 and check your predictions in 1.

Text 1

The print revolution

1 The earliest known book was printed in China in the year 968 and metal type was in use in Korea at the beginning of the fifteenth century, but it was in Germany around the year 1450 that a printing press using movable metal type was invented.

2 Capitalism turned printing from an invention into an industry. Right from the start, book printing and publishing were organized on capitalist lines. The biggest sixteenth-century printer, Plantin of Antwerp, had twenty-four printing presses and employed more than a hundred workers. Only a small fraction of the population was literate, but the production of books grew at an extraordinary speed. By 1500, some 20 million volumes had already been printed (Febvre and Martin 1976).

3 The immediate effect of printing was to increase the circulation of works that were already popular in a handwritten form, while less popular works went out of circulation. Publishers were interested only in books that would sell fairly quickly in sufficient numbers to cover the costs of production and make a profit. Thus, while printing enormously increased access to books by making cheap, high-volume production possible, it also reduced choice.

4 The great cultural impact of printing was that it facilitated the growth of national languages. Most early books were printed in Latin, the language of educated people, but the market for Latin was limited, and in its pursuit of larger markets the book trade soon produced translations into the national languages emerging at this time. Printing indeed played a key role in standardizing and stabilizing these languages by fixing them in print, and producing dictionaries and grammar books. Latin became obsolete as national literatures were established in the sixteenth century.
